California 2025 Title 24 Energy Code

Registration Workflow—When is Registration Required?

Project Type	Single-Family Residential	Low-Rise Multifamily	Nonresidential/ High-Rise Multifamily
	Single-family homes, townhouses, duplexes, and additions/alterations to these buildings. **(Typically 1-2 stories)**	Multifamily buildings 3 stories or less, including applicable low-rise mixed-use. **(≤ 3 stories)**	Commercial, industrial, retail, offices, schools, etc. and multifamily 4 stories or greater. **(≥ 4 stories)**
Applicable Forms (2025)	**CF1R** – Certificate of Compliance (design /permit) **CF2R** – Certificate of Installation (construction) **CF3R** – Certificate of Verification (field verification)	**LMCC** – Low-Rise Multifamily Certificate of Compliance (design/permit) **LMCI** – Low-Rise Multifamily Certificate of Installation (construction) **LMCV** – Low-Rise Multifamily Certificate of Verification (field verification)	**NRCC** – Certificate of Compliance (design/permit) **NRCI** – Certificate of Installation (construction) **NRCV** – Certificate of Verification (field verification) **NRCA** – Certificate of Acceptance (acceptance testing)
When is Registration Required?	**Registration is required if the project includes measures that require Energy Code Compliance (ECC) field verification / diagnostics testing.** If no ECC measures are required (purely prescriptive), registration is not required. When ECC measures are included, the CF1R, CF2R, and CF3R must be registered through an approved ECC Provider registry.	**Registration is required if the project includes measures that require Energy Code Compliance (ECC) field verification / diagnostic testing.** Some LMCI forms do not require registration. LMCI forms with specific numbered measures generally do require registration. Forms ending in "-H" are associated with with field verification / diagnostic testing and require registration. Prescriptive LMCCs for new construction / additions / alterations and associated prescriptive LMCI forms currently do not have an approved ECC Provider registry (per CEC guidance).	**Registration is required in the following cases:** **NRCV** – required for applicable field verification / diagnostic testing (e.g., building air leakage, IAQ / mechanical ventilation, local mechanical exhaust, certain plumbing / hot-water verification, etc.) **NRCA** – required for applicable acceptance testing (e.g., lighting controls, mechanical systems, covered processes, envelope features). **Note:** NRCC and NRCI are generally not registered through the ECC Provider. NRCA acceptance testing is handled through an ATTCP (Acceptance Test Technician Certification Provider) program, not the ECC registry.
